

WEEKLY UPDATE | July 5 – 2021

CELEBRATE FREEDOM!

Stay CONNECTED WEEKLY UPDATE

Facilities and Distribution Department

Facilities Updates:

For the past three weeks the Facilities Department has been installing new air scrubbers/ purifiers in each site including the Admin office.

These air purifiers have Nano Strike Technology. Please watch the videos below to learn more about how your air scrubber's work. These systems will be running 24 hours per day. This will ensure our air is free from contaminates.

The Power button is located on top of the unit (blue light on the left of the unit will indicate if it's on) and should be on when you get to your site on.

We will make a Video in the future describing how to clean the unit and upload it into the weekly update.

I would like to send a big shout out to our Directors, Managers, and Facilities Staff for ensuring that the health and safety of our children and staff are our top priority. We could not have done this without you!

Testimonial from an admin staff: I usually start coughing as soon as I walk into the admin building. But since the installation of these units, I have not been coughing at all. Thank you for having these installed.

5 Ways Hackers Use Public Wi-Fi to Steal Your Identity

BY PHILIP BATES

Love using public Wi-Fi? So do hackers!

Learn how cybercriminals can access your private data while you use public Wi-Fi.

We've all used public Wi-Fi: it's free, saves on your data allowance, and is always helpful in speeding up loading times.

Shoulder Surfing

This might seem obvious, but we often forget these sort of simple security measures.

Whenever using an ATM, you should check those around you, making sure no one's peeking as you enter your PIN.

It's also a danger when it comes to public Wi-Fi. If someone is hovering around when you're visiting private sites, be suspicious. Don't submit anything personal like a password. It's a very basic scam, but one that certainly still works for hustlers and hackers.

A "shoulder surfer" might not even need to be behind you: just watching what you type can give criminals something to work with.

How to Protect Against Shoulder Surfers

Be vigilant. Know who's around you. Sometimes, paranoia can help. If you're not sure of those around you, don't go on anything private.

Don't underestimate the importance of what you're filling out or reading either: medical information can be useful to identity thieves, for example. If it's a document or webpage you wouldn't want anybody else seeing, take precautions to stop that from happening.

Another option is to purchase a privacy screen; these limit what people see on your screen.

This Week Early Childhood Education Facts

▶ Did you know?

A toddler between the ages of 1 and 2 years, will gain 2 million new brain connections every second. At 2 years of age, a child has more than 100 trillion new brain connections, or synapses. However, when a child finally becomes an adult, more than 50% of these acquired synapses disappear.

“The goal of early childhood education should be to activate the child's own natural desire to learn.”
